ISO 27001 and ISO 27701 certifications

We offer a flexible service that we can tailor to your needs.

ISO 27001 is the only globally recognised standard for information security. Achieving ISO 27001 certification is the best way to demonstrate your organisation's commitment to information security and data privacy compliance.

ISO 27701 extends the information security standard into the data protection and data privacy domain and is the only current way for organisations formally to evidence their adherence to their data protection regime.

Whether you are seeking to certify for the first time, re-certifying or extending your scope of applicability, Securys can help you with both implementation and ongoing support.

Why does your organisation need ISO 27001/27701 certification?

Increasingly, governments and large organisations require evidence of security and privacy compliance as part of their procurement process. Achieving ISO certification is the best way to demonstrate your organisation's commitment to information security and data privacy compliance.

## Protect and enhance your reputation

Information security is not an IT problem, it is a business problem. ISO 27001 puts systems in place to deliver the technical and operational controls that reduce the risk of unauthorised access, accidental damage and data breaches, all of which are requirements of GDPR. Certification demonstrates a clear commitment to Information Security Management to third parties and stakeholders.

ISO as a competitive advantage

Certification is fundamentally about evidencing trust and confidence – and these can provide a competitive edge. In today's world, your customers, business partners and shareholders want to be sure that you're not putting them or their businesses at risk by failing to have appropriate safeguards around information and technology-enabled business assets.

Future-proofing your security practices

Built into the ISO 27001 management system is a continuous improvement cycle (Plan, Do, Check, Act). Following this cycle allows an organisation continuously to improve their security practices. This approach can also be applied to the wider business. The ISO 27701 privacy extension to the standard helps organisations extend their risk management beyond information security into the wider domain of data protection. Effective technical and organisational controls of data protection are a legal requirement under the EU's GDPR and the UK's Data Protection Act (DPA) 2018.
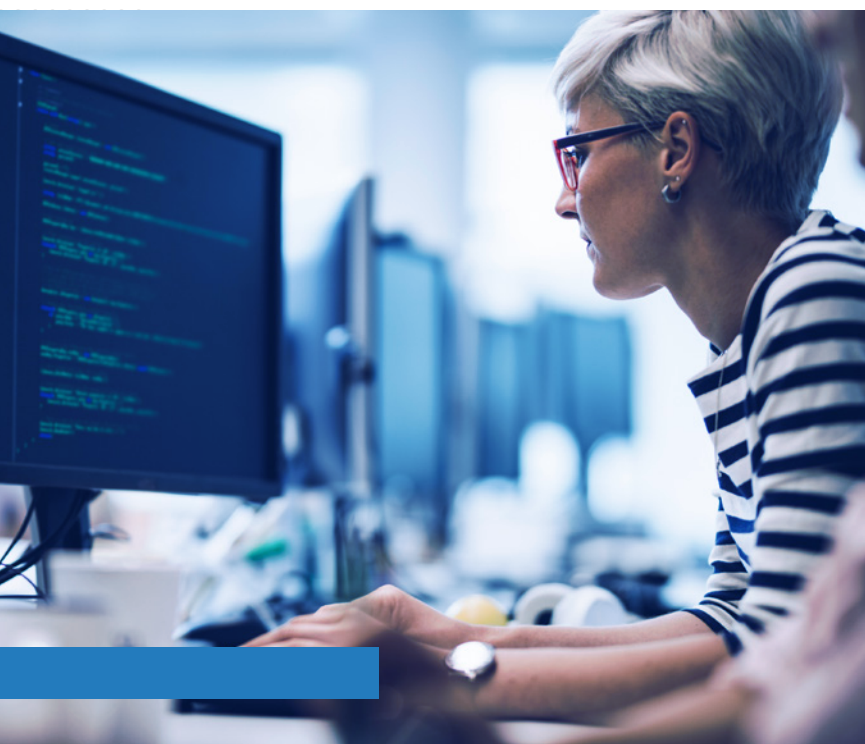

The Securys approach to ISO certification

As a specialist privacy and information security consultancy, Securys offers support services to organisations seeking to certify under ISO 27001 and ISO 27701 or maintain their existing certifications.

We offer a flexible service – meaning we can help you implement our proprietary Securys policy and procedure framework, or we can support the internal development of your organisation's own documentation and controls.

We can also provide ongoing support including the required internal audit that forms part of the validations of the ongoing delivery of an ISO certified privacy and information security framework.

The Securys approach to ISO compliance ensures that your organisation fully implements the policies and procedures within the ISMS so that as well as demonstrating your commitment to privacy, your organisation is genuinely better protected against information security and privacy threats and risks.
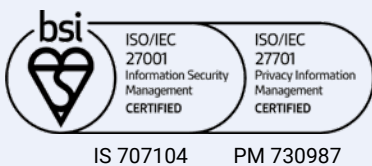

Achieving ISO certification is the best way to demonstrate your organisation's commitment to information security and data privacy compliance.

About Securys

Securys is a specialist data privacy consultancy with a difference. We're not a law firm, but we employ lawyers. We're not a cybersecurity business but our staff qualifications include CISSP and CISA. We're not selling a one-size-fits-all tech product, but we've built proprietary tools and techniques that work with the class-leading GRC products to simplify and streamline the hardest tasks in assuring privacy. We're corporate members of the IAPP, and all our staff are required to obtain one or more IAPP certifications. We are ISO 27001 and ISO 27701 certified with a comprehensive set of policies and frameworks to help our clients achieve and maintain certification. Above all, our relentless focus is on practical operational delivery of effective data privacy for all your stakeholders.

We're not just a consultancy. We're your privacy engine room. We can stand in your boardroom and do strategy with the best of them, and work with your compliance teams to solve knotty problems. We can audit your compliance and deliver drillable risk dashboards across the organisation. But above all we can get involved at ground level and help your frontline teams get the job done. That's Privacy Made Practical®.
